The intelligent Dispensing System

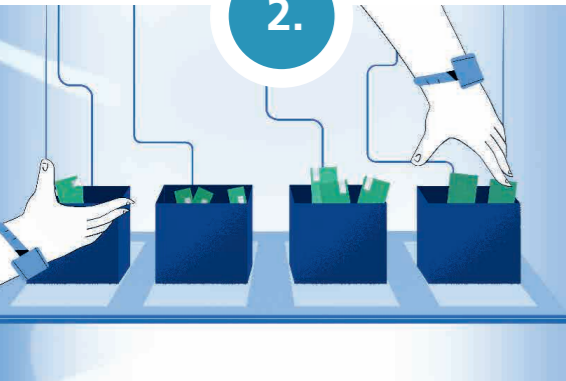

Digitalization in 3 steps

1.

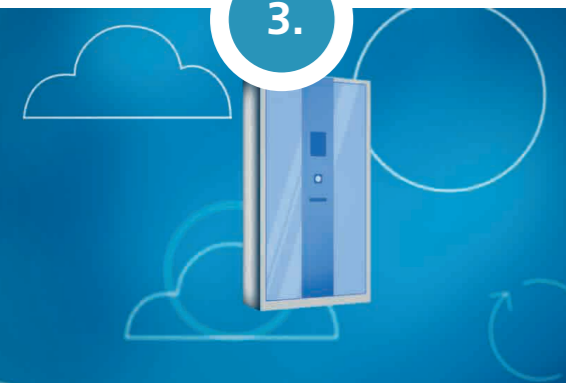

Identification

2.

Withdrawal

3.

Door closure

The i.cupboard 4.0
does the rest!

Dispensing cabinet i.cupboard 4.0

The i.cupboard 4.0 is much more than just a cabinet, every removal or return of material can be assigned to a person without a doubt. Access is granted to persons with an RFID badge. The i.cupboard 4.0 uses precise scales to determine all stocks and their changes and sends them to the cloud.

The integrated screen can be used to display additional information about the items or withdrawals can be allocated directly to a cost center or customer order.

Stocks, re-orders and access rights are controlled centrally and conveniently on a computer. A complete overview of all cabinet activities is available at any time – even across different locations.

The i.cupboard 4.0 is equally suitable for distributed and consignment stocks. The system collects the stock levels fully automatically and informs about each individual material withdrawal with time, number of articles and consumers.

Shelf with 1 scale for up to 80 kg

Shelf with 6 scales for up to 4 kg

Shelf with 4 scales for up to 20 kg

Shelf with 8 scale for up to 4 kg

SHELVES OVERVIEW

Inside the i.cupboard 4.0 every article is allocated a suitable storage location depending on its size and weight. Four different robust shelf types are available, so that the i.cupboard 4.0 can be individually equipped according to your needs.

Shelves can be added to the i.cupboard 4.0 at any time.

Your advantages

Articles are counted automatically with **precise scales**

person-precise allocation of goods **withdrawals**

Fully automatic **reordering** of goods

Support to **reduce consumption** and **increases productivity**

Automatic inventory

Reduction of procurement and storage costs

Digitizes procedures

Access to material **24/7**

Cloud application with **reporting**

i:cupboard 4.0

TECHNICAL DATA

- Robust steel cabinet with dimensions: 1063 x 1990 x 520 mm (W x H x D)
- Modern design
- Large screen for additional information
- Painting in RAL 7035, special painting on request
- Electrical connection 100-230 VAC
- Cloud solution with interfaces for SOAP, XML, EDifact, REST
- Locking mechanism with RFID recognition, supports common technologies
- Four types of shelves for flexible equipment (max. 112 weighing positions)
- Height adjustment in increments of 25 mm
