

Load Cell SNC 1500/7500kg

Fully digital, single point oscillating-wire load cell, made of high-quality tool-steel, for nominal loads of 1500 to 7500 kg.

General

As in all DIGI SENS load cells, an oscillating-wire transducer is used to convert the force/load into an electrical signal. This patented element is able to deliver a signal that can be directly processed by a computer.

The calibration data is stored in the load cell electronics. A built-in temperature measurement ensures active temperature compensation.

Applications

Calibrated measurement of loads, weights and forces in applications such as:

- platform scales
- container scales
- mixers
- tipping weighing systems incorporated in vehicles
- conveyor scales
- robot arm scales

Description

Very robust single point load cell, fully hermetic, made of high tensile steel designed for harsh environments and insensitive to shock.

Torsion forces due to eccentric application of the load are filtered out and complicated suspension systems (pendulum bearings), designed to avoid unwanted stresses, are superfluous.

The logically designed, practically displacement-free mounting is characterised by a very low measuring displacement of less than 0.1 mm. The result is a weighing system with outstanding measuring precision.

The calibration data of the load cell are stored in

a built-in memory.

No adjustment is required either at commissioning or when a load cell is replaced.

A 5V TTL output signal is available for load and temperature.

For processing and transmission of the signal, as well as for other more complex measuring and regulating functions, DIGI SENS offers suitable electronics and software.

Together with this electronics and other components, such as inclinometers or accelerometers, the SNC load cells can be extended to form a complete weight or force measuring systems for static or dynamic applications.

Load Cell SNC

Technical Data

Nominal load (other ranges on request)	E_{max}	kg	1500	7500
Combined error (hysteresis, linearity, repeatability)		% of E_{max}	±0.129	
Repeatability		% of E_{max}	±0.03	
Hysteresis		% of E_{max}	±0.125	
Linearity over measuring range		% of E_{max}	±0.01	
Creep 30 min		% of E_{max}	±0.10	
Temperature drift of zero		%/10K	±0.015	
Temperature drift of sensitivity		%/10K	±0.040	
Overload capability without permanent damage		% of E_{max}	100	
Deflection at nominal load	S_{nom}	mm	< 0.10	
Warming-up time for max error		min	< 5	
Power supply <ul style="list-style-type: none"> voltage max current consumption type current consumption 		V DC mA mA	5±10% < 25 10	
Temperature range <ul style="list-style-type: none"> calibration service 		°C	-10...+40 -15(opt. -30) ...+70	
Output signal <ul style="list-style-type: none"> frequency at zero sensitivity amplitude 	f_0 f_n-f_0	Hz Hz V DC	14950±350 2600±200 5V TTL	
Load cell material			High quality tool steel with anticorrosion coating	
Sealing			Complete hermetic sealing, laser welded	
Cable			With connector and exchangeable cable	
Protection class			IP68 / IP69K	
Weight	P	kg	5	13
EMC			according to IEC 61000	
Environmental (shocks / vibrations)			according to IEC 60068	

Load Cell SNC
